KENTUCKY WONDER WAX.

GROWING HIGHLY DEVELOPED SEED. such as will produce the best results, is a science few understand. Success depends on perfect planting stock, right soil, climate and care

Certain sections of the world are adapted to growing certain crops. We grow our seed in the sections where they develope most perfectly. Radish Sweet Peas, Carrots, Lettuce and Onions are mostly grown in California. Beans and Peas in the North, Some in Europe, etc.

By issuing a small catalogue, owning all our properties free of debt, operating business economically, being satisfied with a small profit and growing in immense quantities we are enabled to sell good seed at a Low Price.

Our customers tell their friends of our seed and they buy. We now number our customers by the hundred thousand. Few seedsmen in the world have as many customers.

New things or old things under a new name abound in most seed catalogues. You will find good things all through ours.

Icicle Radish above, Sweetheart Watermelon below. Producing the Best economically enables us to sell Better Seed at Lower Prices than those who buy second handed from jobbers.

The photograph above is a field of Onion, the one below Sweet Peas; hundreds of acres of these are growing from selected stocks in Calif. for our seed. No one has better seed-few have as good.

If you live within 150 miles of us we can send seed to you by Parcel Post up to 50 pounds at 1 cent a pound.

COPENHAGEN MARKET CABBAGE.

Earliest and Best Large Round or Flat Head Cabbage

The illustration is a good representation of this splendid new early cabbage, one our customers should not overlook. The ripening is early and uniform, maturing at one time and almost with Early Jersey Wakefield. Considering its early season, the heads are remarkably large, averaging ten pounds in weight. One of its chief features is compactness; its leaves, which are light green, are round, dish-shape and fold tightly together in remarkably compact and solid form; it is so solid that many more plants can be grown on an acre than is possible with most sorts. It has few outer leaves, which permits close planting, and it grows close to the ground on a short stem. The entire crop can be harvested at one time and thus clear the field for other crops. The quality is exceptionally good. Earliness, ripening at one time, compact growth, large heads and high quality are features which have made this cabbage popular. We have noticed that this is the largest and handsomest cabbage exhibited at State and County Fairs early in September. Pkt. 5c.; ½ oz. 18c.; oz. 30c.; 2 oz. 55c.; ¼ lb. $1.00.; lb. $3.50.

THE CHOICEST IN FLOWER SEEDS

We are Growers of Flower Seeds, There are only a few other seedsmen in this country, none in this locality, who grow or know much about Flower Seeds. They depend on European grown seeds and this season these are short. Many will have to depend on old seed. You will make no mistake in placing your order with growers like us and securing fresh seed.

Flowers usually do best in a rich light garden soil not too wet or too dry. Some succeed fairly well if not too rich. Decomposed manure is beneficial to nearly all plants. Asters, Pansies and most bulbs, etc., like plenty of moisture (a rich soil well watered), while Portulacca will not start till weather is warm. Most plants wanted early can be started in fine soil in a sunny window in the house, great care being taken to keep moist and warm. Some hardy seeds will start well outdoors if sown early, but many will rot if earth is cold and wet. Nice mellow beds can be prepared outside for the hardier seeds when weather is warm and they can be transplanted from these when large enough.

ANNUALS are plants which bloom first season from seed and then perish. Those like Balsams, Nasturtiums and Zinnias, which are easily killed by frost, are called half-hardy annuals. Seeds of these should be sown, if wanted for early, in the house, but most sorts will do better if sown outside in a nicely prepared bed and transplanted to rich soil where wanted. All plants should be kept free from weeds, not crowded, and be well cultivated.

PERENNIALS are our hardy plants which live year after year; tender Perennials must be kept in house during winter. Hardy Perennials are such plants as Pansies, Hollyhocks, Sweet William, Rocket, etc. Most of these will not bloom till second season. These and biennials are often benefited by a covering of hemlock boughs, straw or something which will protect from the sun and not smother plants.

BIENNIALS produce plants first season which blossom, mature seeds and die the second season, such as Canterbury Bell, Digitalis, etc. They require about the same treatment as perennials, and like them are often benefited by a slight covering of evergreen boughs in winter and spring; these should hold the snow and keep sunshine off, but not smother the plants.

GREENHOUSE SEEDS require the greatest care and should be carefully sown in a box or flowerpot in light, fine earth, kept at a temperature of about 70 degrees. Always remember they need to be moist (not wet), and warm. A pane of glass over a flowerpot or a wet cloth or paper will help hold moisture. When well up transplant carefully as required.
